AIDS is not over, but it can be

Huge progress has been made since 2000 and millions of lives have been saved. But there are still important milestones to reach, barriers to break and frontiers to cross. The world has agreed to meet a set of global targets by 2020 as part of UNAIDS Fast-Track strategy to end the AIDS epidemic as a public health threat.

Methodological note: Estimated numbers of new HIV infections by key population were compiled from country Spectrum files submitted in 2015 to UNAIDS (2014 data), available modes-of-transmission studies and additional sources of data drawn from GARPR reports. Where data were lacking, regional medians were calculated from available data and applied to countries' populations.
